الفضول سيقهر الخوف أكثر من الشجاعة

جيمز ستيفينز
This story starts in a distant city, near the banks of the Blue River, in China.

The city of Wuhan.

بدأت هذه القصة في ووهان البعيدة، وهي مدينة في الصين عبرها النهر الأزرق.
A doctor named Li Wenliang lived in this city. He was the first to discover there was something strange in patients with severe cases of the flu.

This discovery made him very curious, so he began to study and collect data.

A short while later, he decided to send out a warning: a new disease was about to spread!
cough  سعال
fever  حمى-سخونة
sore throat  التهاب الحلق
headache  صداع الرأس
breathing difficulty  صعوبة في التنفس
common cold  الزكام
Doctors and scientists immediately went to work and found the culprit!

It was a microbe that was so tiny it could reach the smallest part of our lungs.

They called it Sars-CoV-2, or simply "Coronavirus".
How small is a Coronavirus?

It is so small that over 350,000 viruses of this kind can live on the tip of a needle. That's almost as many as all the babies born each day across the whole world!
Not only is the Coronavirus small, it’s also sticky and athletic!

A sneeze is enough to make it travel almost 2 meters. That’s why it spread quickly, reaching our country and many others.

This virus is not large, but small, sticky, and athletic! A sneeze is enough to make it travel almost 2 meters. That’s why it spread quickly, reaching our country and many others.

This virus is not large, but small, sticky, and athletic! A sneeze is enough to make it travel almost 2 meters. That’s why it spread quickly, reaching our country and many others.
The Coronavirus quickly became well-known in our country.

Radio, TV, newspapers, and adults do nothing but talk about it now.

And, because of it, they could even close schools.
Name: Coronavirus
Origin: China
Height: 100 nanometers
Current residence: The world
Distinguishing features: Contagiously friendly
Shortcoming: Gets a lot of us out of sorts

NM = Nanometers

雀巢咖啡
Passport

الاسم: فيروس الكورونا
الأصل: الصين
الطول: 100 نانو متر
الإقامة الحالية: العالم
علامات مميزة: مبتاع
المساوئ: له تأثير سيئ للغاية على الكثير

nm = Nanometers
Not being able to go out with your friends is kind of sad. But it’s important that you don't, because a sneeze, a hug, or even a **handshake** could be enough to get you sick.

Scientists say the virus spreads very quickly in **closed quarters and crowded places**. It really gets on well with everyone, no matter what language you speak, where you come from, or how old you are.

**Not being able to go out with your friends is kind of sad. But it’s important that you don't, because a sneeze, a hug, or even a **handshake** could be enough to get you sick.**

**Scientists say the virus spreads very quickly in **closed quarters and crowded places**. It really gets on well with everyone, no matter what language you speak, where you come from, or how old you are.**
To prevent the virus from having too much fun jumping from one person to the next, day and night, scientists and doctors are studying how to defeat it.

They say that we shouldn’t be too afraid, we should be cautious.

But there is something you can do to keep it from spreading. It’s called prevention.

ولمنع الفيروس من الاستمتاع بالقفز من شخص لآخر، فإن العلماء والأطباء يقومون بالبحث عن طريقة لهزيمته ليلاً ونهاراً.

كما أنهم يقولون أنه ليس علينا الخوف بل الحذر. كما أن هناك شيئاً باستطاعتك أن تقوم به لمنعه من أن ينتشر، وهذا يدعى بالوقاية.
1. Wash your hands regularly with soap and water.

   اغسل يديك بانتظام بالماء والصابون.

2. Sneeze and cough into your elbow or use a tissue... and wash your hands again!

   عندما تعطس وتسعل، غطّ فمك بمنديل أو بذراعك ...
   واغسل يديك مرة أخرى!

3. Avoid closed quarters and crowded places.

   تجنب الأماكن المغلقة و المزدحمة.
4. Do not touch your eyes, nose, and mouth... this is where the virus can enter your body.
لا تلمس عيناك وأنفك وفمك ... فهذه أهم مداخل أجسامنا للفيروس.

5. Throw away used tissues.
تخلص من المناديل المستعملة.

6. If you have a fever, sore throat, and you feel like you have the flu, don’t put your health and that of others at risk, stay indoors.
إذا كنت مصابًا بالحمى والتهاب الحلق وكنت تشعر، بأنك مصاب بالأنفلونزا فلا تعرض صحتك وصحتة الآخرين للخطر.
But if you have to go out, wear a mask! *
و إذا كان عليك الخروج، فارتدي كمامة!
How long will it be before we can see our friends again? Some time might pass, but scientists are working to get us back to normal.

In the meantime, use your creativity! Lots of kids all over the world are already coming up with other fun ways to greet each other without touching hands or hugging...

What would your greeting be?

هل سبقي طويلاً دون لقاء أصدقاءتنا؟
قد يستغرق الأمر بعض الوقت، لكن العلماء يعملون على إعادة الحياة للوضع المعتاد.
في هذه الأثناء، عليك باستعمال مخيلتك!
العديد من الأطفال من جميع أنحاء العالم يبتكرون بالفعل طرقًا مرحة لتحية بعضهم دون لمس اليدين أو معانقة بعضهم البعض...
فما التحية التي ستختبرها أنت؟
The situation with **COVID-19** is changing all the time; dear parents and readers, please do always check in with the latest government advice in regards to your health, safety and movement.

الأوضاع متغيرة بكثرة مستمرًا الآن نظراً لفيروس **COVID-19**. ننصح أولياء الأمور والقراء الأعزاء بإتباع تعليمات ونصائح الدولة بما يتوجب علينا فعله للحفاظ على صحتنا وسلامتنا.
